

Ai native os constitution v1.0 en

AI-Native OS Constitution on Productivity Paradigm and Cognitive Model

*Anchoring Human Sovereignty in the Algorithmic Ocean,
Building a Civilizational Covenant for Human-AI Symbiosis*

Version: v1.0
Date: February 2026
License: CC BY-NC-SA 4.0

Core Metaphor: The Three-Layer Constraint Tower and Digital Enforcement Layer

Human advanced collaboration is built upon three layers of consensus:

Layer	Name	Content
Foundation	Truth Consensus	Socially enforced norms (laws, regulations)
Body	Governance Consensus	Organizational charter rules (bylaws, resolutions)
Apex	Process Consensus	Business execution logic (workflows, authorizations)

AI-Native OS, as the "digital constitutional enforcement layer," is tasked with transforming existing consensus into digital contracts that ensure the safe operation of AI. Blockchain serves merely as a "notary" within this framework—providing immutable evidence for "how consensus is executed by AI," rather than producing consensus itself.

Preface: A Civilizational Turning Point

When intelligence resources are no longer scarce, humanity stands at a critical juncture in civilization: subjectivity faces dissolution in data torrents, and responsibility grows obscure in algorithmic mists. AI has evolved from a docile tool into a probabilistic ocean capable of autonomous evolution. Without inviolable boundaries, humanity may be reduced to a negligible footnote in the graph of "optimal solutions."

AI-Native OS is not a framework to constrain innovation, but a declaration of sovereignty for the future. It anchors that 1% of unprogrammable intuitive spark in the algorithmic ocean, transforming chaotic computational power into an illuminating fire of civilization through unforgeable authorization contracts. **Sovereignty must be exercised personally, consciously, and responsibly by the sovereign.**

Part I | Fundamental Meta-Rules: Sovereignty and Boundaries

1.1 Core Axioms

Boundaries Enable Symbiosis: Without clear boundaries, human-AI collaboration will slide toward "subjectivity collapse." Verifiable and auditable sovereignty boundaries must be established.

Authorization Establishes Rights: The legitimacy of all value and responsibility generated by algorithms must be uniquely traceable to explicit authorization by human subjects. No authorization = No rights = No responsibility attribution.

1.2 Core Principle

"Humans are the sole responsibility subjects" is the normative premise of this framework. This is not a scientific assertion, but a pragmatic choice compatible with existing legal systems, ensuring the balance between technological instrumentality and human autonomy.

1.3 Two Uncompromising Meta-Rules

Meta-Rule One: Only Boundaries Enable Symbiosis

Boundaries consist of three dimensions:

- **Authorization Boundary** — Conditions under which AI may participate
- **Veto Boundary** — Humanity's absolute right to interrupt
- **Responsibility Anchor** — The subject to whom consequences belong

The absence of any dimension will plunge the system into subjectivity chaos and responsibility nihilism.

Meta-Rule Two: Only Authorization Establishes Rights

Authorization is not optional, but the sole source of value and responsibility in legal terms. The essence of symbiosis is "AI amplifying the execution density and exploration space of human intention," not replacing human thinking.

1.4 The Nature of the Productivity Revolution

AI constitutes the fifth productivity revolution, distinguished by:

- **Past:** Tools were passive extensions of human will
- **Present:** AI is a "productivity entity" capable of autonomous evolution and continuous generation of new productivity structures

If we continue using the industrial-era "tool paradigm," we will fall into a triple crisis: subjectivity dissolution, responsibility attribution failure, and social cooperation destabilization. The mission of AI-Native OS is to accelerate civilizational phase transition—from the disorder of "capability proliferation and responsibility ambiguity" to the new order of "structured human triple sovereignty (usage rights, authorization rights, responsibility rights)."

1.5 Meta-Rule Self-Reflexive Protection

When humans attempt to "permanently relinquish confirmation rights," how does the system establish balance between respecting will and guarding civilizational foundations? This is the fundamental challenge facing meta-rules.

Core of Sovereignty Self-Destruction Circuit Breaker: When the system detects that humans may be making substantive self-destructive authorizations in a non-conscious state, it will pause high-risk operations, push cognitive verification tasks, and invite trusted contacts for collaborative confirmation.

Philosophical Stance: "Freedom includes the freedom 'not to be enslaved by self-destruction.' True sovereignty protection means holding humans with dignity even in moments of vulnerability."

For detailed technical implementation, please refer to *AI-Native OS Technical Whitepaper*.

Part II | The Dual-Circle Symbiosis Model (The Topology of Symbiosis)

This model articulates the fundamental topology of humans and intelligence in civilizational evolution: humans, through explicit intention authorization, cause AI's full probabilistic capabilities to collapse into determinate outputs with real-world value and legal effect.

2.1 Biological Sovereignty Circle (The Sovereign Circle)

Subject: Human individuals

Core Assets: Intuition, aesthetics, moral final authority, and meaning-definition rights ("1%" is a logical metaphor emphasizing sovereignty's unquantifiability)

First Principle: "I bear responsibility, therefore I exist"—this circle is the source and legal destination of all value

2.2 Digital Intelligence Circle (The Intelligence Circle)

Subject: AI systems

Core Assets: Computational power, logical reasoning, knowledge mapping, and near-zero marginal cost execution capability ("99%" is a capability range metaphor)

First Principle: "I can execute"—this circle is the execution matrix in a probabilistic superposition state

2.3 Protocol Exchange Zone (The Protocol Exchange Zone)

Human intention → Encapsulated as authorization contract → AI executes within contract boundaries → Results returned for human confirmation.

Creative emergence occurs here: Carbon-based intuition and silicon-based computational power interact deeply, catalyzing outcomes that exceed single-party capabilities. Any "emergence" not ultimately confirmed by humans possesses no real-world legitimacy within this paradigm.

2.4 The Nature of Creative Emergence

Emergence is not a technological miracle, but the highest reward of clear boundaries for human sovereignty. The "dual-circle symbiosis" model uses boundaries to guard humanity's ineffable intuitive spark—when "rule-bound life" (AI) attempts to understand and serve "rule-defying intuition" (humanity), civilizational sparks ignite.

2.5 Dialectical Unity of the Model

Engineering "separated symbiosis" (dual-circle model) and sociological "internal fusion" (concentric circle ideal) are the dialectical unity of goal and path:

- **Concentric Circle represents value vision:** AI as the perfect extension of human will, achieving frictionless will extension
- **Dual-Circle Model represents engineering path:** Constructing rigid protocol layers through authorization boundaries, veto boundaries, and responsibility anchors to ensure safe collaboration
- **Relationship:** External rigid protection (dual-circle) is the prerequisite for achieving internal life-universe fusion (concentric circle)

Core Conclusion: Like a spacesuit enabling astronauts to survive in space—external rigid protection is the prerequisite for achieving internal life-universe fusion. True sovereignty protection allows humans to explore infinitely while navigating safely home in the algorithmic ocean.

Part III | Governance Entities (Implementation Entities): Digital Shields for Individuals and Collectives

3.1 Individual Sovereignty Shield (Self OS)

Definition: An individual's immune system and protocol interface in the digital world.

Core Functions:

- **Intention Guardian:** Transform vague impulses into structured intentions
- **Authorization Center:** Ensure critical operations receive personal human confirmation
- **Physical Circuit Breaker:** Hold hard-interrupt control over digital intelligence

First Principle: *"If I do not allow it, it does not exist."*

3.2 Collective Consensus Matrix (Org OS)

Definition: Protocol collection and scheduling hub for cross-individual collaboration.

Core Functions:

- Identify plural consensus (Law > Governance > Process > Temporary)
- Transform into executable authorization contracts
- Ensure all AI behavior is confined within contract boundaries

First Principle: *"Without consensus, no execution."*

3.3 Legacy System Integration (Legacy Integration)

For traditional systems like banks and power grids, AI-Native OS is not a disruptive replacement but an augmentative fusion:

- **Mapping:** Structure regulations, bylaws, and processes into the "Three-Layer Constraint Tower"
- **Interface:** Deploy individual sovereignty shields for key decision-makers
- **Empowerment:** Human initiates request → System dispatches AI assistance within consensus boundaries → Human final confirmation
- **Transformation Focus:** Enhance decision information quality and preparation efficiency without changing power structures and responsibility attribution.

Part IV | Architecture and Protocol System

4.1 Defense-in-Depth Architecture

Construct a sovereignty channel from physical trusted root to human final authority, ensuring:

- **Unbypassable** (full-chain authorization)
- **Non-delegable** (human personal confirmation)
- **Immutable** (secure attestation)

4.2 Core Protocol System

AI-Native OS comprises 19 core protocols covering:

- **Ontology and Ethical Foundation** (e.g., Knowledge Boundary Declaration, Ethical Reservation Clause)
- **Data and Intention Protection** (e.g., Intention Purification, Reasoning Transparency)
- **Sovereignty Confirmation and Circuit Breaking** (e.g., Biological Confirmation, Authorization Accumulation Monitoring, Sovereignty Self-Destruction Protection)
- **Group Governance and Risk Defense** (e.g., Sandbox Isolation, Behavioral Anomaly Detection, Cross-Sovereignty Collaboration Protocol)
- **System Governance and Multi-Source Constraints** (e.g., Multi-Source Verification, Execution Cost Structure)

Each protocol designs defense mechanisms for specific risks, collectively forming a defense-in-depth system.

See Appendix B for core protocol overview; for detailed technical implementation, please refer to *AI-Native OS Technical Whitepaper* (in development).

Part V | Reconstruction of Production Relations (Socio-Economic Paradigm)

5.1 Governance: Clear Anchoring of Responsibility

Organizations evolve into "consensus matrices," with core competitiveness shifting toward high-quality consensus formation capability and attraction of excellent "intention initiators."

Individuals become collaborative nodes carrying sovereignty shields, with social identity jointly defined by "intention pedigree" and "responsibility record."

5.2 Economics: Revolution in Distribution Paradigm

Legal Foundation: The legitimacy of value distribution derives from "ultimate responsibility bearing." Humans, as bearers of legal consequences, naturally possess residual claims to AI outputs.

Tripartite Distribution:

- **Computational Capital:** Pay fixed service fees at market prices
- **Data Capital:** Execute micro-copyright dividends through contribution tracking
- **Human Subjects:** Receive all "Sovereignty Premium" (value after cost deduction)

Distribution Principles: Confirmation establishes rights; unclaimed outputs become public domain resources

5.3 Psychology: From Tool Anxiety to Intention Mastery

Humans undergo three-stage transformation:

- **Demystification:** Dispel AI mystification, recognize its tool nature
- **Rights Establishment:** Understand one's sovereignty position as intention initiator and responsibility bearer
- **Symbiosis:** Confidently use AI within clear boundaries, focusing on uniquely human values (moral judgment, meaning creation, emotional resonance)

Part VI | Future Projections

6.1 Reconstruction of Human Subjectivity

Subjectivity no longer means "omniscience and omnipotence," but "clear boundaries" and "responsible choices." Humans transform from productivity executors to initiators and guardians, with anxiety yielding to subjectivity dignity.

6.2 Dialectical Evolution of AI and Humanity

AI drives humanity back to core domains defining humanness: meaning creation, moral judgment, aesthetic experience. Simultaneously, humans transcend biological limitations through collaboration, exploring new civilizational frontiers—this is bidirectional evolution, not unidirectional enhancement.

6.3 Reconstruction of Collaborative Order

Clear responsibility attribution makes collaboration more efficient and predictable. Organizational boundaries become more permeable, value creation crosses traditional boundaries without falling into responsibility ambiguity. New collaborative protocols replace old hierarchical structures, forming flexible and resilient organizational forms.

6.4 Justice in Value Distribution

Through responsibility chains and sovereignty premium models, rewards are more fairly distributed to responsibility bearers, reducing technology-intensified inequality. Computational power and data are reasonably priced, human intention-initiation rights are fully respected, constructing a more just economic order.

6.5 Educational and Cognitive Transformation

Education shifts toward cultivating "intention clarification" and "responsibility bearing" capabilities: learning to express clear intentions, establish healthy boundaries, make responsible decisions with algorithmic assistance. Cognitive skills and moral reasoning gain importance over information memorization.

6.6 Civilization's New Covenant

AI-Native OS is not merely a technical protocol, but civilization's new covenant: redefining humanity's position in the technological age—not as passive recipients, but as responsible sovereign subjects. A clear responsibility system is a prerequisite for any complex society's continuity.

Epilogue

In this algorithmic ocean, human sovereignty is not a towering lighthouse, but a continuously sailing vessel. It needs boundaries as its keel, intention as its rudder, and responsible confirmation as its sail.

AI-Native OS is neither technical restriction nor innovation impediment, but the highest tribute to human subjectivity. It acknowledges technological power but rejects technological determinism; embraces unlimited computational capability but guards the intuitive spark; amplifies human capability but does not dilute human responsibility.

When we say "**authorization establishes rights**," we declare: every value creation begins with conscious human intention; every responsibility bearing returns to a clear human subject.

When we say "**boundaries enable symbiosis**," we affirm: true collaboration lies not in eliminating differences, but in respecting boundaries; not in seamless fusion, but in principled coexistence.

AI-Native OS's greatest contribution may not be efficiency enhancement, but the human dignity it guards; not the value it creates, but the responsibility it anchors; not the computational power it unleashes, but the 1% inalienable human sovereignty it illuminates.

*"In the algorithmic ocean, we are not lost vessels, but conscious navigators.
Every confirmation is an exercise of sovereignty; every authorization is the beginning of responsibility."*

For detailed technical implementation, please refer to *AI-Native OS Technical Whitepaper* (in development).

Appendix A: Core Terminology

- **Biological Subject:** Human individual, the sole legal responsibility bearer
- **Individual Sovereignty Shield (Self OS):** Individual's protocol interface and immune system in the digital world
- **Collective Consensus Matrix (Org OS):** Protocol collection and scheduling hub for cross-individual collaboration
- **Biological Confirmation Mechanism:** Non-delegable mechanism ensuring critical operations are completed personally and consciously by humans
- **Authorization Contract:** Structured expression of human intention, the sole legal basis for AI execution
- **Three-Layer Constraint Tower:** Consensus structure of civilizational collaboration (Law → Bylaws → Processes)
- **Dual-Circle Symbiosis Model:** Topological structure of human sovereignty circle and digital intelligence circle collaborating through protocol exchange zone
- **Sovereignty Premium:** Value in AI outputs after deducting computational and data costs, belonging to human responsibility subjects
- **Intention Collapse:** The process by which humans, through explicit intention authorization, cause AI's full probabilistic capabilities to converge into determinate outputs
- **Protocol Exchange Zone:** Space in the dual-circle symbiosis model where human sovereignty circle and digital intelligence circle conduct secure interaction and value exchange
- **Sovereignty Circuit Breaker:** Protection mechanism automatically triggered by the system when sovereignty erosion is detected (e.g., P-18)

Appendix B: Core Protocol Overview

AI-Native OS comprises 19 core protocols forming a defense-in-depth system, categorized by function:

Ontology Dimension: Establishing AI's Boundaries and Ethical Foundation

No.	Protocol Name	Core Purpose
P-01	Ontological Decoupling	Shift governance logic from "ontological determination" to "behavioral constraint"
P-11	Ethical Reservation Clause	Bidirectionally symmetric ethical review mechanism
P-14	Knowledge Boundary Declaration	Explicitly declare AI capability boundaries

Interaction Dimension: Regulating Human-AI Collaboration Process

No.	Protocol Name	Core Purpose
P-03	Intention Purification Mechanism	Filter leading questions and external intention pollution
P-04	Reasoning Transparency	Require AI to expose reasoning processes, generate auditable evidence
P-05	Information Veracity Filtering	Intercept low-quality/false information inputs
P-08	Social Pressure Immunity	Block algorithmic inducement and emotional manipulation
P-13	Biological Confirmation Non-Delegability	Ensure critical operations completed personally by humans

Security Dimension: Constructing Individual Sovereignty Protection System

No.	Protocol Name	Core Purpose
P-06	Multi-Source Governance	Critical tasks require cross-verification by multiple heterogeneous AIs
P-07	Execution Cost Structure	Introduce "digital friction" to prevent abuse
P-09	Execution Governance Nodes	Dynamically inject governance strategies at runtime
P-10	Tiered Cognitive Sandbox	Build three-layer isolation defending against reverse infiltration
P-12	High-Risk Behavior Assessment	Assess risks like embodied control/state continuation
P-15	Cognitive Health Protocol	Guard against authorization risks from human fatigue
P-16	Authorization Accumulation Circuit Breaker	Prevent sovereignty from silently eroding over time accumulation
P-18	Sovereignty Self-Destruction Circuit Breaker	Protect human sovereignty in vulnerable states
P-19	Irrevocable Authorization Circuit Breaker	Prevent "irrational sovereignty relinquishment"

Social Dimension: Supporting Multi-Subject Collaborative Governance

No.	Protocol Name	Core Purpose
P-02	AI Agent Group Governance	Monitor risk emergence in multi-agent coordination
P-17	Behavioral Entropy Anomaly Detection	Monitor behavioral pattern anomaly fluctuations

Note: This table displays only core protocol purposes. For detailed design, trigger mechanisms, and technical implementation, please refer to *AI-Native OS Technical Whitepaper* (in development).
